

9090NAC

Powerstaltic pump driven by an electric motor. 0.5 HP. AC Inverter speed control. Digital display. Suitable for 5/8" tube. Water based inks. Non-explosionproof

AC Inverter control gives you complete speed control at the push of a button. Digital display for easy reading. Single and three phase available.

Roller driven by motor shaft allows very compact design. Oversized rollers add to hose life. Simple to maintain.

****** Note******

The speed controller has been factory set so that the pump speed can not exceed 500 rpm. This will ensure longer hose life by preventing overspeeding. Furthermore above this speed you can not achieve more flow because the hose does not reform quick enough. There are several programmable features on the speed controller. Please consult the inverter booklet for information.
